

High Efficiency Series

GRO 1:1 Ratio System

Reverse Osmosis System

High efficiency, low waste
GRO membrane technology

Efficient, Economical Solution

Reverse Osmosis is the most efficient and cost-effective way to provide your family with high-quality drinking water.

Pentair's High Efficiency GRO Membrane has a 50% recovery rate creating less waste water. This means you're making one gallon of water to wasting one gallon of water, making it an environmentally friendly option.

The Science of How It Works:

Reverse Osmosis systems do not need electricity, only water pressure. These systems push water straight from the tap through a membrane and filter system that remove the impurities to get clean drinking water. The pressure forces water molecules through the GRO membrane and leaves behind any solid molecules, like salt, chemicals, and debris. 99% of all contaminants are removed.

Reverse Osmosis Process

Proudly Assembled In The USA By:

Wood Bros.
Since 1972

High Efficiency Series

GRO 1:1 Ratio System

Available in a 36 GPD, 50 GPD, and 75 GPD
Unmatched 5-Year Warranty
Made in the U.S.A.

Get rid of Rust, Herbicide, Pesticide, Chlorine (Taste & Odor), Lead, Arsenic, Fluoride, Mercury, Nitrate/Nitrite, Sand, Scale, Trihalomethanes (THM), Cyst, Turbidity, Barium, Cadmium, Chromium, and Selenium

What's Included:

Sediment Filter - This filter removes the dirt, sand, rust, and other physical particles.

Carbon Filter - This filter removes the chlorine, chloramines, foul tastes, odors, and chemicals.

GRO Membrane - Remove 96% of contaminants and doubles the recovery over standard reverse osmosis elements

Post-Carbon Filter - Removes the dissolved gases, tastes, and odors from the holding tank water.
